

POTENTIALLY CONTAMINATED

Specific Pathogen Free (SPF) Animal Room Notice

Room #	Building	Date
--------	----------	------

The animals in this room were found to contain a contamination. The positive animals were either immediately separated or treated, but until the next round of sentinel testing confirms the SPF status of these animals, please use extra caution when working in this room.

Suspected Pathogen(s):

Labs **MUST** adhere to all **rules of entry** and **Personal Protective Equipment (PPE)** requirements, which can be found, posted on this door. This will aid in the prevention of contamination of your animals, as well as the spread of contamination to another lab's animals.

- Animals in this room can only be moved to other Yellow rooms or to Red rooms without additional testing.
- Animals testing negative can be moved to Green rooms.

This room should be entered only after you have completed working in non-contaminated SPF rodent rooms, but before you enter any contaminated SPF rodent rooms.

**IF YOU ARE MANIPULATING RODENTS FROM A
CONTAMINATED ROOM, DO NOT ENTER ANY OTHER
SPF ROOMS AFTER DOING SO.**

If you have any questions or concerns regarding this contamination, please contact one of the following people:

Cherie Chang, Lea Ann Chlebek, Erin Himrod or Eric Wall at 6-1699
